

Systemic Therapy

Systemic Therapy Brockville at Brockville General Hospital

The Brockville General Hospital Chemotherapy site is up and running.

We are slowly building a patient base and to date have helped some patients from having to drive to the Cancer Centre of SEO at Kingston General Hospital for their treatment.

The Ambulatory Care Unit (ACU) nursing staff is involved administering chemotherapy, chemotherapy related procedures such as removing ambulatory infusion pumps and cancer administration of supportive therapies such as blood transfusions and bisphosphonates e.g. Pamidronate.

We have a very bright corner in our ACU for patients and their family. We are looking forward to expanding our program and serving more patients in the Leeds and Grenville counties.
